Worldwide Joint Training & Scheduling Conference 2005

JKDDC Working Group

10 Feb 05

CAPT Miller

JKDDC Working Group Issues

05JKDDC-01: Access to a LMS that crosses functional boundaries

Discussion: Users need unobstructed, centralized visibility of federated data. COCOMs can not afford the purchase nor afford to maintain LMS/LCMS capability.

Impact: Can not effectively manage training and readiness programs without near real time access to training, qualification/certification information. Can not effectively manage individuals without effective LMS.

Submitted By: DTRA, EUCOM, PACOM

Endstate: Hosting environment for real time access to individual qualification, certification and experience data.

Plan of Action: Establish LMS Workgroup that is not subordinate to JKDDC Workgroup. Identify LMS and Course Development Tools that are best of breed. Identify required timeline for development. Identify resource provider who will POM for funds.

Nominated OPR/OCR: OSD/JS J7

JKDDC Working Group Issues

05JKDDC-02: Re-visit the previously formalized JKDDC life cycle management business rules.

Discussion: On initial concept development, entities taking on Lead Development Agent (LDA) responsibilities thought they would receive resources commensurate with the responsibilities assumed. Subsequently, experience has been that resources have not and are not intended to flow to LDAs. Lack of resources is causing LDAs to re-evaluate their ability to meet previously assumed responsibilities.

Impact: Lack of resources to develop, maintain, and update content may seriously jeopardize or impede quality and consistency of content products.

Submitted By: All stakeholders

Endstate: Sufficient resources available to identify, develop, and sustain course content from cradle to grave.

Plan of Action: Find the resources to fully support LDAs. Coordinate with OSD to re-prioritize funding and/or find new sources. Provide update to stakeholders at next JIPT.

Nominated OPR/OCR: JS J7/OSD, COCOMs, CSAs

JKDDC Working Group Issues

05JKDDC-03: Identification/Development of Joint Core Competencies and Curriculum to lead/guide content development.

Discussion: Need to place requirements in front of content development IAW the Joint Training System. Initial course lists (FY 03 – FY 04) developed from JFCOM provided course list. FY 05 course list developed from formal JKDDC Working Group process.

Impact: Failure to fully identifying core competency and curriculum requirements and priorities prior to identification courseware content requirements increases risk of not fulfilling training program objectives.

Submitted By: JFCOM, NORTHCOM

Endstate: JKDDC content developed in consonance with stakeholder identified joint core competencies and curriculum.

Plan of Action: Stakeholders provide individual core competencies (general from JS J7 and position specific from COCOMs/CSAs) to JKDDC/Joint Staff. Identify curriculum developer. Develop requirements-based curriculum.

Nominated OPR/OCR: Stakeholders/JS J7

JKDDC Working Group Issues

05JKDDC-04: Submitting JKDDC Program Initial Capabilities Document (ICD) with stakeholder buy-in

Discussion: Due to change of Workgroup participants and emerging operational requirements, discussion within JKDDC Working Group is not contained and bounded. Confusion continues regarding the full-scale capability of the broad-ranging JKDDC program; the majority of the discussion covered the development of "courses," which is just one portion of the JKDDC capability. An operational perspective of the JKDDC program is best addressed through a formal ICD.

Impact: Discussion and decision-making within JKDDC Working Group is fragmented and focused on implementation rather than strategic and transformational goals.

Submitted By: JS-J7

Endstate: Submit ICD for JKDDC program to Joint Capabilities Integration and Development System (JCIDS) Process.

Plan of Action: JKDDC develop ICD in collaboration with stakeholders and submit through JCIDS process. (Training FCB, JROC)

Nominated OPR/OCR: JS-J7
